

Project

Turtle Creek Channel & Floodplain Restoration Project
Lebanon, Ohio

CASE STUDY

Client: City of Lebanon
Design Engineer: Burgess & Niple
Completed: 2019

ERC was hired as the General Contractor for the restoration of the Mill Creek. The scope of work included the construction of one (1) riffle, rock toe, buried grade control, grading, and all site restoration. After mobilizing to the site ERC cleared and grubbed the entire site and then excavated 2,900 CY of earth. In order to align the stream and to slope the stream banks ERC then imported over 1,525 tons of rock including various rip rap and native bed material. The site was finished by planting trees and installing 574 live stakes.

Services
